As you can see, there's plenty of flow between the steps.

Prototyping

- an incomplete, early version of a product
- a prototype can be as simple as a drawing on a piece of paper
- or as complex as a web application
  - or anywhere in between those extremes

Prototyping – Why?

- Best evaluation of alternative designs ⇔ **let the users interact with these designs**
- "Interactive version" of a design ≠ **software version of the design**

Prototyping – Why?

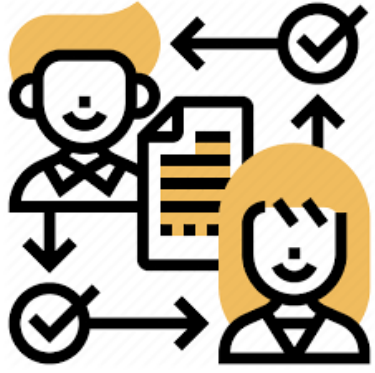

- **Sketch** – explore a design space through multiple iterations / variations
- **Develop design**
  - Test concepts / assumptions / ideas
    - Find how it should work in real life
- **Thinking through making**
- **Identify and prioritize most important features**
- **Choose between alternatives**
- **User testing** – different from interviewing

Prototyping – WHAT?

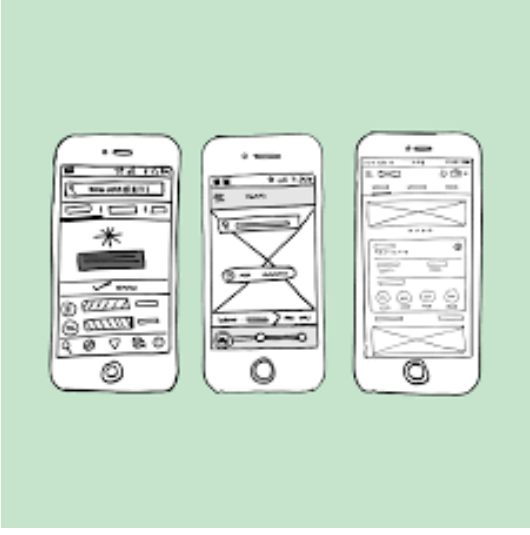

- Technical aspects
- Workflow, task design
- Screen layouts and information display
- Graphic design, look-and-feel
- Content
  - e.g. taxonomy of objects/widgets, etc.
- Controversial or critical areas
  - e.g. security and privacy issues

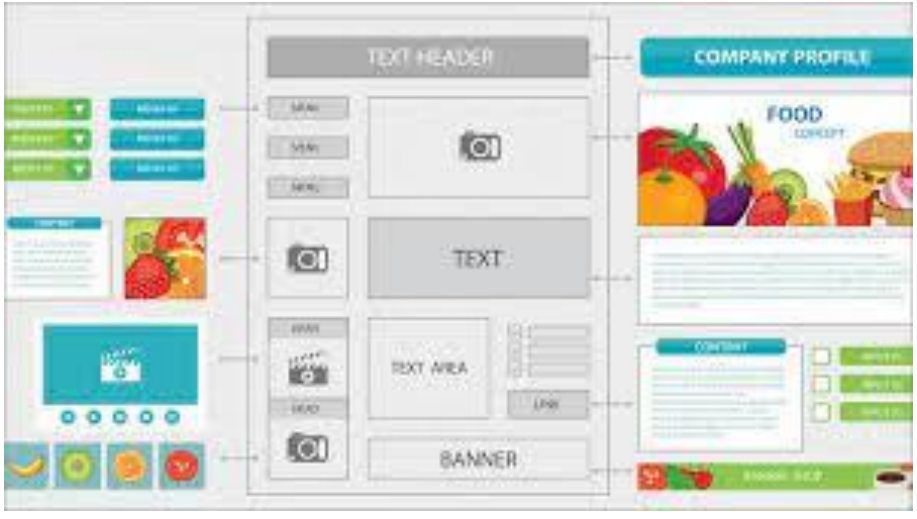

Jenis Prototyping

- Low Fidelity - Fast

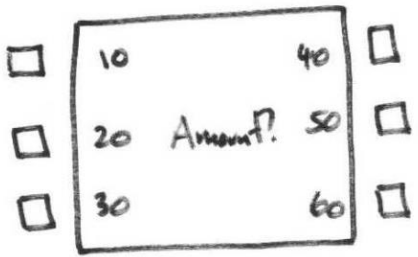

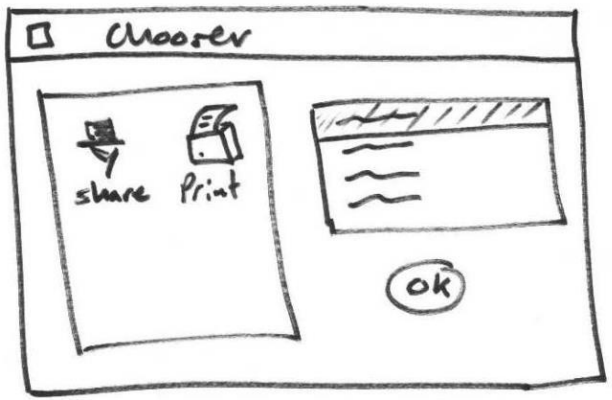

- High Fidelity - Slow

Low fidelity

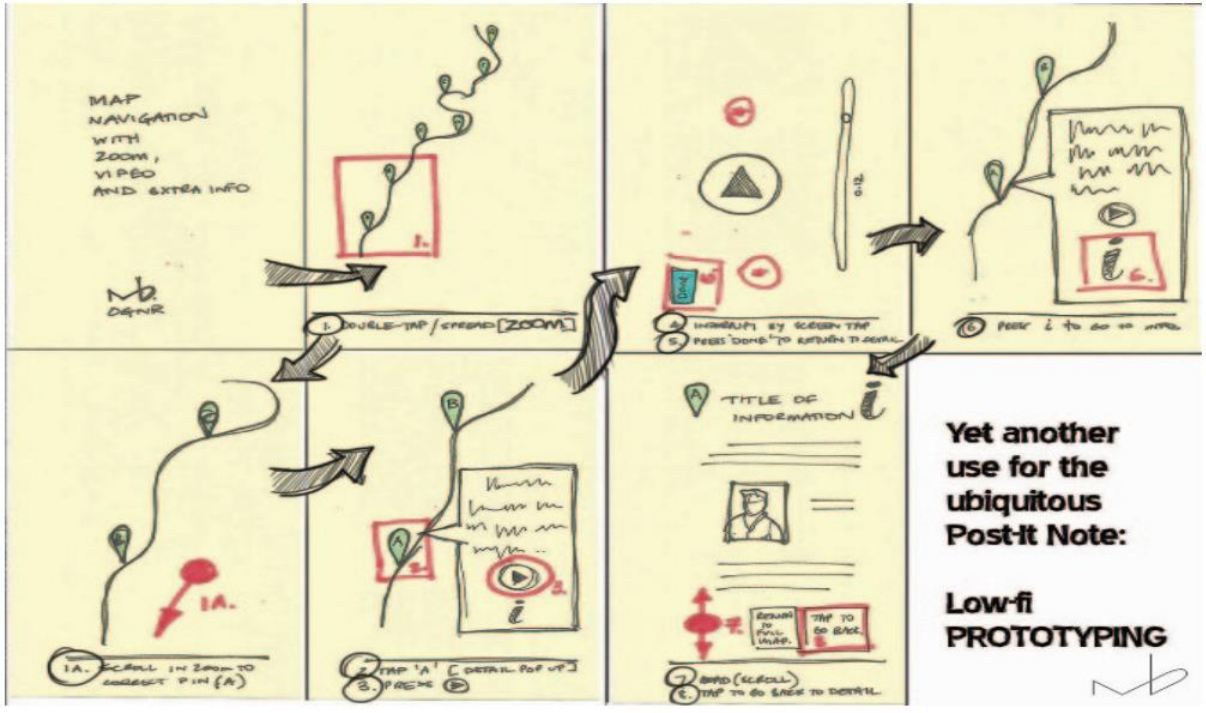

- **Hand drawn designs**
  - Quick, cheap, easy to change and update
  - Examples: sketches of screens & task sequences, post-it notes, etc

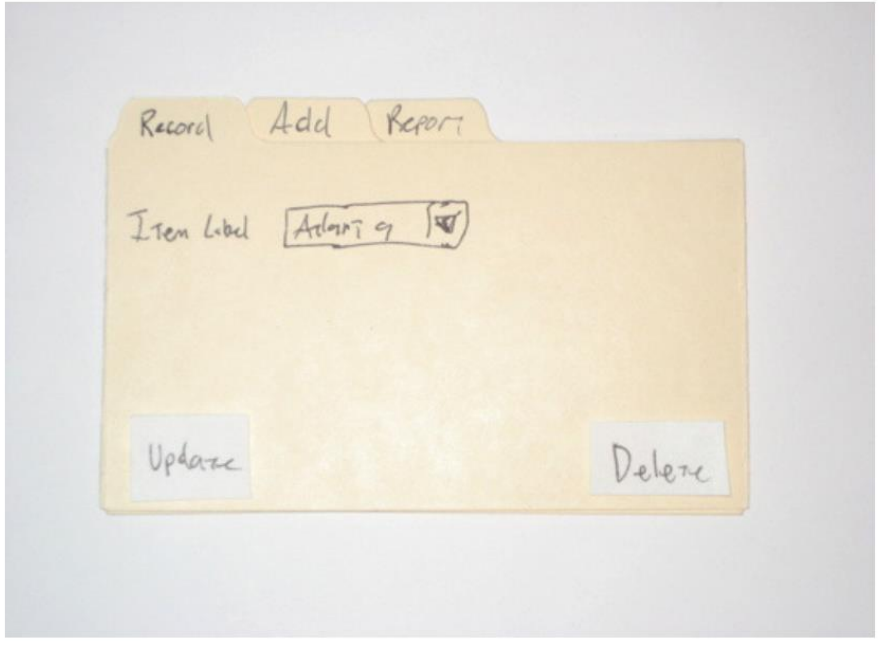

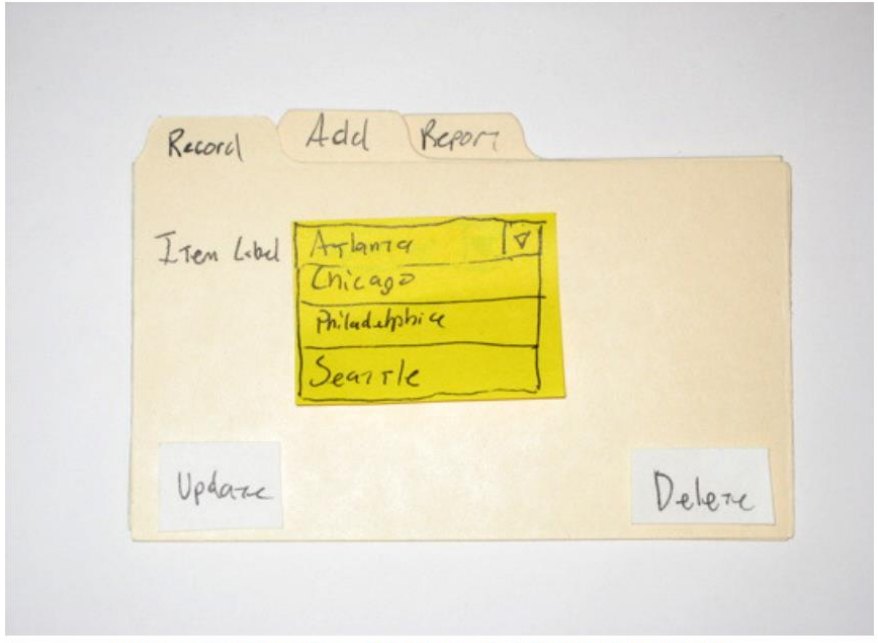

Low fidelity

- Need to detail what each element does and how you interact with it

Paper Prototype

Paper Prototype

- **A paper-based prototype of a handheld device to support an autistic child**

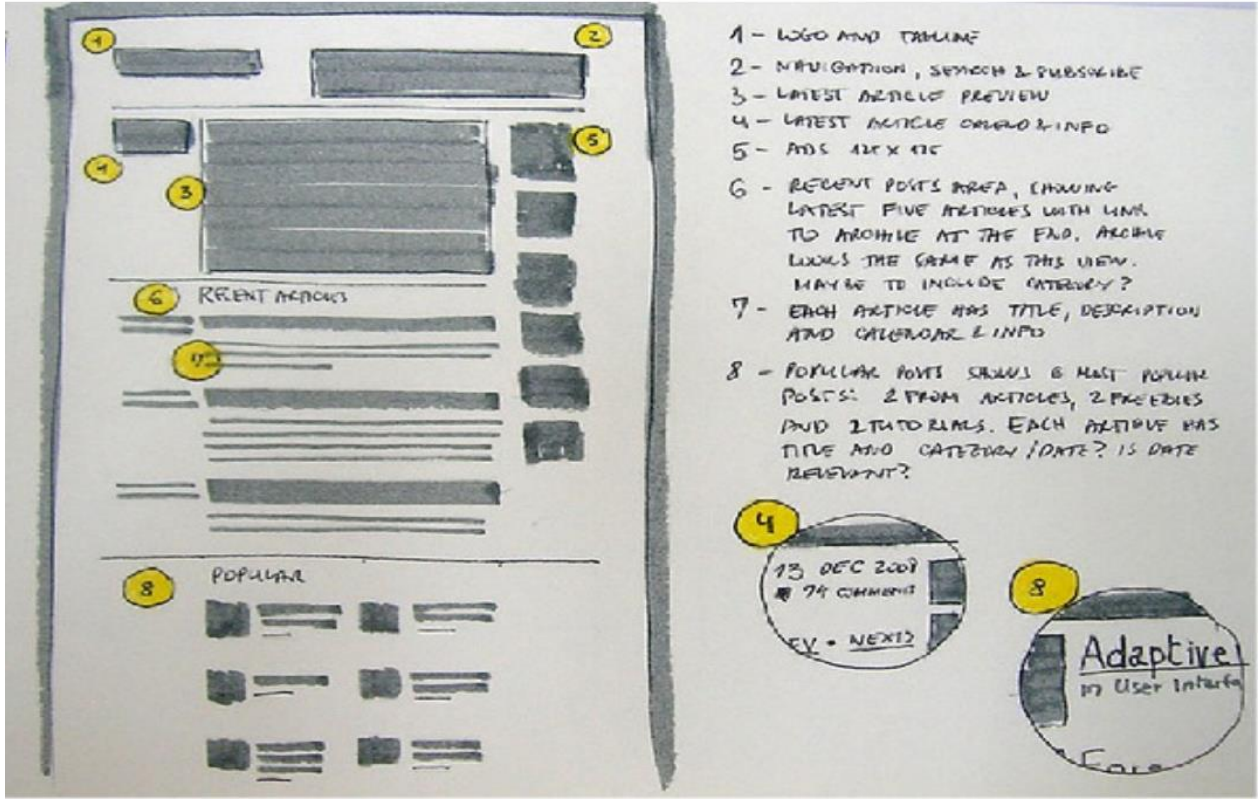

Wireframe

- Wireframe
  - Schematic of information architecture
  - Shows relationships of content/navigation
  - Non-visual design
  - Defines scope

Working Prototype

- **Working prototype**
  - Works
  - May be limited in features
  - Shows how actual use plays out
  - Form may not be accurate
  - Mock up interactivity
    - *It's not the system controlling the interaction, it's the designer / developer (but users believe it is the system!)*

Digital Wireframe Tools : Balsamiq

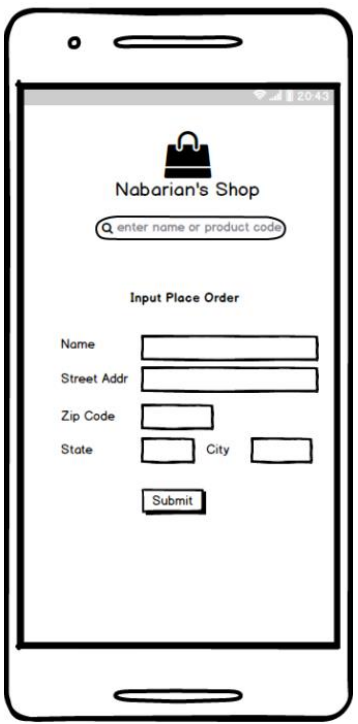

UI/UX

Balsamiq

- Balsamiq Wireframes is a rapid **low-fidelity UI wireframing** tool that reproduces the experience of sketching on a notepad or whiteboard, but using a computer.

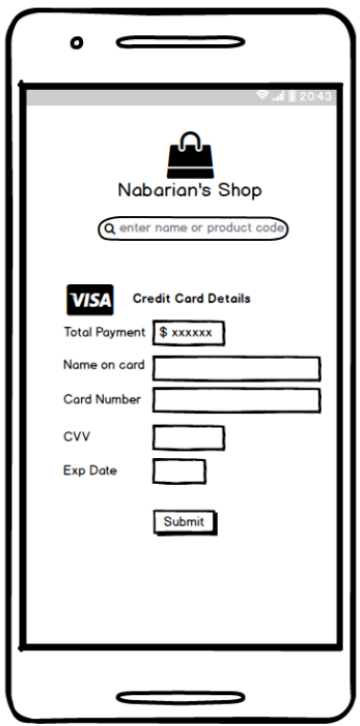

Balsamiq - Practice
