As you can see, there's plenty of flow between the steps.

Prototyping

- an incomplete, early version of a product
- a prototype can be as simple as a drawing on a piece of paper
- or as complex as a web application
  - or anywhere in between those extremes

Prototyping – Why?

- Best evaluation of alternative designs ⇔ **let the users interact with these designs**
- "Interactive version" of a design ≠ **software version of the design**

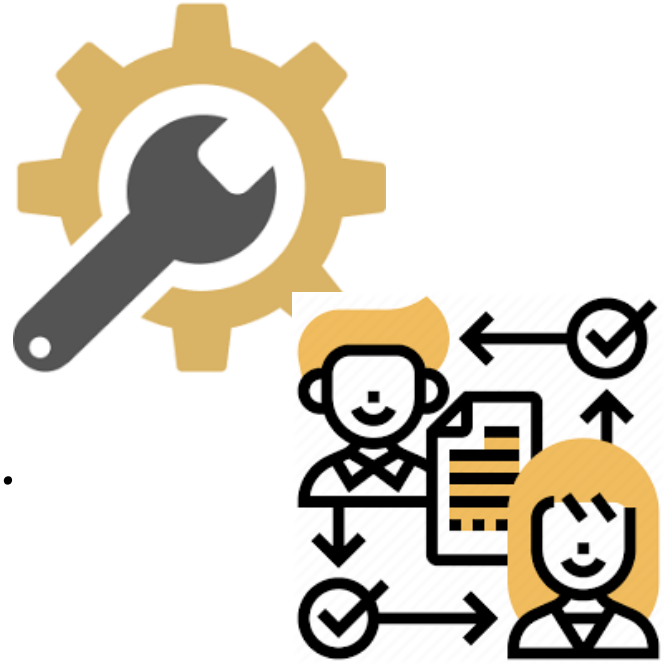

Prototyping – Why?

- **Sketch** – explore a design space through multiple iterations / variations
- **Develop design**
  - Test concepts / assumptions / ideas
    - Find how it should work in real life
- **Thinking through making**
- **Identify and prioritize most important features**
- **Choose between alternatives**
- **User testing** – different from interviewing

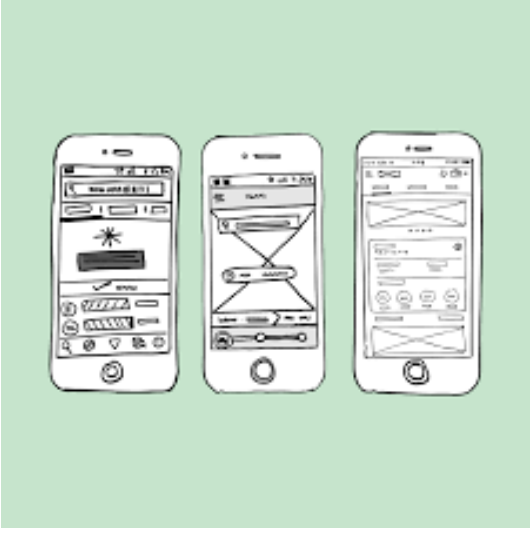

Prototyping – WHAT?

- Technical aspects
- Workflow, task design
- Screen layouts and information display
- Graphic design, look-and-feel
- Content
  - e.g. taxonomy of objects/widgets, etc.
- Controversial or critical areas
  - e.g. security and privacy issues

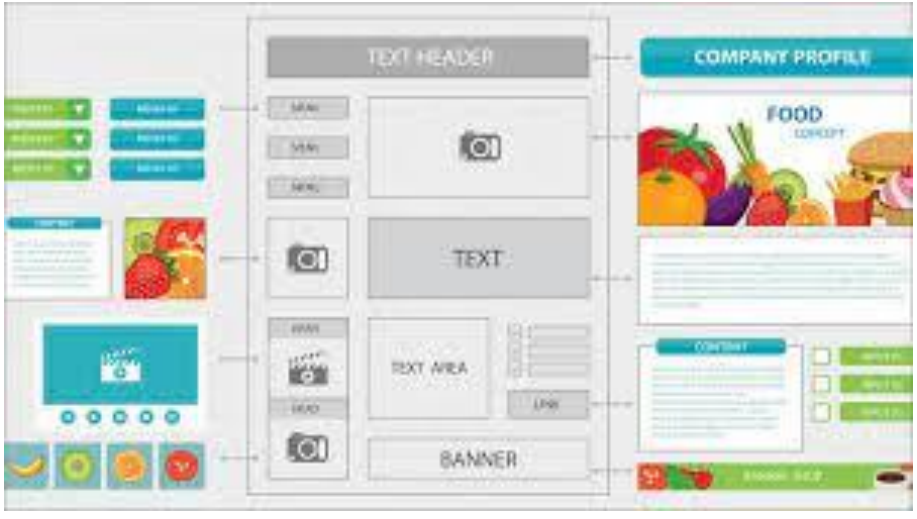

Jenis Prototyping

- Low Fidelity - Fast

- High Fidelity - Slow
