Menu Sistem

UI/UX

Menu Sistem

- Sebuah sistem (aplikasi, web) berisi banyak informasi
- Sistem harus menyediakan cara untuk mengakses informasi
- Hal ini dilakukan dengan:
  - menampilkan informasi dengan daftar pilihan
  - membuat serangkaian daftar yang mengarahkan user dari serangkaian deskripsi umum ke spesifik
- Daftar pilihan ini biasa disebut menu
- Menu adalah bentuk utama navigasi pada sistem
- Jika dirancang dengan benar maka akan membantu user mengembangkan sistem mental model

Menu Sistem

- Menu efektif karena memanfaatkan kemampuan pengenalan (kuat) bukan kemampuan ingatan (lemah)
- Desain sistem menu harus mempertimbangkan kebutuhan user yang yang tidak berpengalaman dan berpengalaman

Format Menu

UI/UX

Format Menu

Sekumpulan panduan untuk memformat menu:

- Consistency: Provide consistency with the user's expectations and menu
- Display: If continual to menu options are necessary, permanently display the menu in an area of the screen
- Presentation: Ensure that a menu and its choices are obvious to the user
- Organization: Provide a general or main menu
- Complexity: Provide both simple and complex menus
- Item Arrangement: Align alternatives or choices into single columns, If a horizontal must be maintained
- Ordering: Order lists of choices by their natural order,
- Groupings: Create groupings of items that are logical, distinctive, meaningful, and mutually exclusive.
- Line Separators: Separate vertically arrayed groupings with subtle solid lines

Format Menu

Sekumpulan panduan untuk memformat menu:

- Selection Support Menus: Support the user by providing faster access to frequently used functions.
- Phrasing the Menu: A menu must communicate to the user information
- Menu Instructions: A meaningful menu title aids in defining the context of the menu
- Intent Indicators: Providing an indication of what will happen when a menu item is selected can
- enhance predictability and exploration of a graphical system
- Keyboard Shortcuts: Allow actions to be taken using the keyboard as well as the mouse
- Defaults: Provide a default whenever possible, display as bold text.
- Unavailable Choices: Unavailable choices should be dimmed or “grayed out.
- Toggled Menu Items

Skema Navigasi

UI/UX

Navigasi

- Navigation is method used to find what they want in a Web site
- Navigation and navigational structure, is the most important element
- A simple and clear navigational structure is the backbone for system features

Navigasi

Four Stages Navigation:

- Orientation: Current location relative to nearby objects and the destination must be determined
- Route Decision: A path must be chosen to get to the destination
- Route Monitoring: The chosen route must be monitored to the proper destination
- Destination Recognition: The destination must be easily recognized

Web Site Navigation Design (1)

- Web Site Navigation Aids
  - To aid Web site navigation and learning
  - Provide feedback concerning one's current location
- Web Site Organization
  - Divide content into logical fragments, units, or chunks
  - Establish a hierarchy of generality or importance
  - Structure the relationships among content fragments, units, or chunks.
  - Create a well-balanced hierarchical tree.

Web Site Navigation Design (2)

- Navigation Page Design
  - Use appropriate menu types
  - Keep navigation-only pages short.
  - Limit prose text.
  - Scrolling: Never require scrolling of navigation-only page and horizontal scrolling

Components of a Web Navigation System

All navigation elements must:

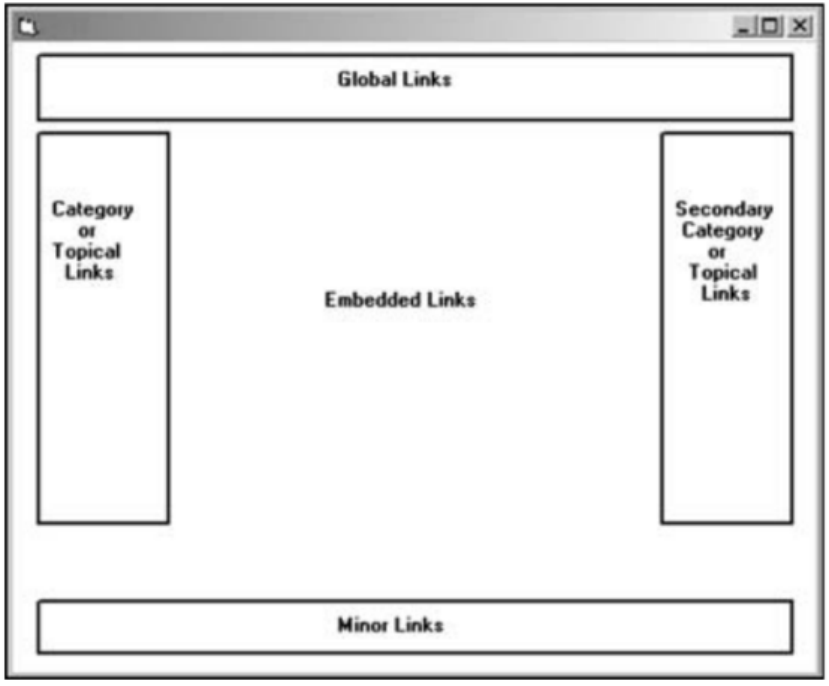

- Make sense in the absence of site context
- Be continually available
- Be obvious and distinctive
- Be consistent in appearance, function, and ordering
- Possess a textual label or description.
- Offer multiple navigation paths.

Navigation Element

Navigation Element:

- Differentiate and group navigation elements.
  - Provide a global navigation bar at the top of each page
  - Provide a local category on the left side of a page
  - provide a secondary navigation column on the right side of the page
  - Place minor illustrative, parenthetical, or footnote links at the end of the page
  - For long pages provide “List of Content” Links and Important global
- Create a common and consistent theme
- Never create pages without navigational options.

Screen Based Control

UI/UX

Screen Based Control

- Screen based control biasa dikenal sebagai widgets
- Component yang bisa dilihat di layar dan dapat berinteraksi denganya
- Mereka adalah objek grafis yang mewakili properti atau objek lain

Screen Based Control

Screen based dapat:

- Selection of particular value
- Editing of particular value
- Display text, value, or graphic
- Perform a command
- Possess a pop-up window.

Screen Based Control

Jenis Screen Based Control:

- Button
- Text entry/read-only controls
- Selection controls
- Combination entry/selection controls
- Specialized operable controls
- Custom controls
- Presentation controls
- Web controls

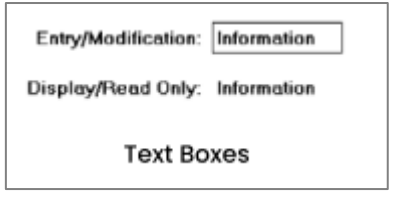

Button

- Description: A square control with a label that indicates action to be accomplished
- Purpose: Start actions, change properties, display menu (pop-up)
- Advantages: Always visible, convenient, Can be organized, provide meaningful descriptions of the actions
- Disadvantages: Consumes screen, Size limits text, Requires pointer to select

Text Entry

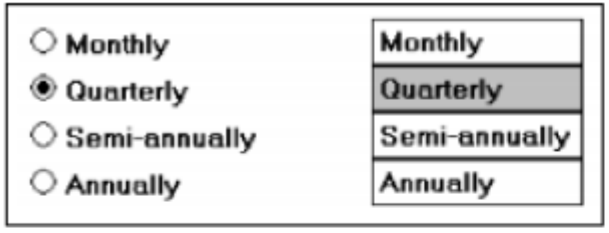

- Description:, Usually rectangular in shape in which text may be entered or read-only
- Purpose: Permit the display, entering, or editing of textual information,
- Advantages: Very flexible, Familiar, Consumes little space
- Disadvantages: Requires keyboard, user must remember text

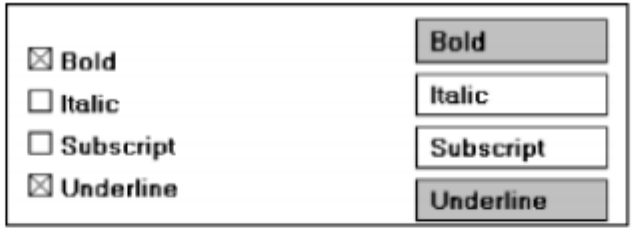

Selection Control

- Presents on the screen all the possible alternatives, conditions, or choices that may exist for an entity, property, or value
- Types:
  - Radio Button: A two-part control consisting of small circles and choice description
  - Check Boxes: A two-part control consisting of a square box and choice description
  - Palettes: A control consisting of a series of graphical alternatives
  - List Boxes: Displayed box-shaped control containing a list of attributes or
  - objects
  - List View Controls: Extended-selection list box that displays a collection of items, consisting of an icon and a label.
  - Drop-Down: single rectangular control that shows one item with a small button to the right side.
